

07 June 2011

**Avia Health Informatics Plc  
("Avia" or the "Company")**

**Odyssey application for smartphones**

Avia (AIM: AVIA), the AIM-listed developer and provider of clinical decision support systems, is pleased to announce the development of its Odyssey SelfAssess product into an application for smartphones. Odyssey SelfAssess uses the extensive and proven clinical content developed for clinician use, and adapts it to allow patients to assess their own symptoms prior to consultation with clinical services.

Avia's wholly owned subsidiary Plain Healthcare Limited, which handles development of the Odyssey product range, has now created an application to offer Odyssey SelfAssess on Windows 7 and Android smartphones. This is also due to be expanded to cover BlackBerry and iPhone platforms.

The Odyssey SelfAssess application can be hosted in the cloud and delivered via 3G and broadband. Initially it will be offered to the occupational health market and is expected to be used in particular for absence management and employee health and wellbeing.

This means that Odyssey SelfAssess will soon be available to anyone with a smartphone or web access to carry out self-assessment of their own condition or to assess a third party's illness or injury.

**Barry Giddings, Executive Chairman of Avia, commented:**

*"The development of Odyssey applications for smartphones is an exciting development for the group as it makes the software even more accessible and means we can now offer Odyssey to corporations looking for solutions for occupational health and absence management. The potential for mobile deployment also opens up opportunities in other new markets around the world."*

**About Avia Health Informatics plc**

Avia is a developer and provider of clinical decision support systems. Its Odyssey product range is used by clinicians and non-clinicians in various environments around the world to provide effective pre-diagnostic healthcare support, increasing the levels of patient care while delivering operational efficiencies. The delivery of Odyssey can be in a static or mobile environment from a PC, laptop, tablet or mobile device, with clinical content, training and services delivered via the web.

Avia's partners provide market reach into geographies outside of the UK, including the United States and Australia.

The Odyssey range is built on a common medical content database which has been developed over the past 16 years. Odyssey is continually updated, tailored with question and answer sets and has a user interface adapted for both the particular user groups and the environment in which it is used.

Environments include prisons, ships, call centres, GP out of hours, walk in centres, care homes, pharmacies and other clinical and non-clinical environments.
